Chrysler Imperial Rose

Dramatic and Beautiful for Floral Arrangements

Entrance to exclusive Bel-Air Estates, Los Angeles

Pasadena Rose Queen Nancy Thorne, with Chrysler Imperial car and Chrysler Imperial Rose bouquet
Leading Seedsmen, Rose Growers and Horticulturists
Since 1871

IN 1871, The Germain Seed and Plant Company was founded in the City of Los Angeles—one of the few pioneer firms in this city that can boast of three quarters of a century of continued progress and expansion. From its humble beginning as a small retail store, Germain’s has steadily grown until it is now a horticultural firm of National and International prominence, shipping its products throughout the United States and to many foreign countries.

Germain’s ultra-modern Retail establishment in Los Angeles’ downtown business district is among the finest in America. We cordially invite you to visit it when in Los Angeles.

Branches patterned after the Los Angeles store are located in the following California communities: San Francisco, San Diego, Santa Maria, San Jose, Fresno, Compton, Salinas, El Monte, Watsonville, Sacramento, and Van Nors and in Phoenix, Ariz.

At our nurseries, many acres of loth and greenhouses are devoted to the culture of orchids, flowering and foliage plants, roses and perennials. Thousands of acres in the West are devoted to the production of Germain’s seed, plants and bulbs—and are supervised by men thoroughly trained in the horticultural profession.

This, perhaps explains why more gardens all over America are planting Germain’s seeds and horticultural products each year.

You’ll Want to Get Your ROSES, SEEDS, BULBS Direct from California

Chrysler Imperial Rose

AMERICA'S FIRST TRULY RED ROSE

The CHRYSLER IMPERIAL ROSE is unmatched by any other red rose. Its vivid, rich tones of crimson are enhanced by darker overtones of glowing oxblood red, and the gem-like lustre of garnet in the folds retains its sparkling beauty.

Long, tapering buds unfold even in adverse weather, opening to large high centered flowers measuring 4 1/2 to 5 inches with 40 and 50 wide petals. These are borne on sturdy, medium long stems. The opening of each glorious rose is a thrilling spectacle of changing, iridescent shades of red.

The flowers are very sweetly scented with true rose fragrance.

In growth, Chrysler Imperial Rose is compact and symmetrical. Its abundant dark green, semi-glossy, disease resistant foliage gives the bush the appearance of a handsome garden shrub.

GERMAIN'S SENSATIONAL NEW
Seedless WATERMELON

Be the first to grow and surprise your friends with this truly sensational new Desert Watermelon—Imagine, no seeds! Germain's Seedless Watermelon, offered this year for the first time, has been hailed as a "new invention" in plant science. It is a true hybrid and, like hybrid corn, has exceptionally high vigor and shows marked resistance to the diseases common to melons. The finest quality fruit, is rounded in form, dark green in color and weighs about 15 to 20 pounds. The flesh is rich reddish pink, its flavor extra sweet and delicious.

In order to produce fruit, the seedless melons must have an ordinary melon close by to supply the necessary pollen. One ordinary melon plant to six seedless plants is sufficient.

Price per packet (10 seeds) of NEW SEEDLESS WATERMELON (Plus pkt. Klondike Blue Ribbon Watermelon) ............................................. Complete $1.00

This is one of the few vegetables that can be grown the year around. The seeds should be sown in drills 15 inches apart and 1½ inches deep, and covered by hand unless following field culture. 079 Blood Turnip (60 days) A very fine strain, requiring a shorter time to mature than Detroit Dark Red. Roots are dark red, round, and flesh is a deep red with lighter center. This variety is sweet, crisp and tender. Pkt 16c.
GERMAN'S Tender-Sweet CORN

Prices are postpaid. Deduct 10¢ per lb. if shipped otherwise.

Culture
Sweat corn should not be planted until 10 days after the last frost. The soil preferred is one rich and moist. Plant in hills 18 inches apart with rows 2 feet apart. Three or four seeds may be planted in each hill, but not more than two allowed to stand. As "sucker" or extra shoots appear they should be removed, as they take strength from the mother plant. Whenever the soil presents an appearance of drying, irrigate.

221 Golden Cross Bantam (68 days) Developed by the Purdue Experiment Station. This hybrid is probably the best of all the yellow corns. Plants 6 to 7 ft. high, ears 8 in. long, 12 to 14 rows. Pkt. 15c; ½ lb. 60c; 1 lb. $5.60

GERMAN'S CABBAGE

Plant seed in beds or light, rich texture at a depth of not to exceed ½ inch; and the soil should be pressed firmly over the seed. The plants should not be allowed to crowd one another before they are transplanted, but as soon as large enough to be handled should be lifted out to their permanent place. For early varieties, such as Wim- nesdot, plant in rows 2½ feet apart, plants 1 foot apart in the row. The larger headed varieties, 1 foot apart in the row. Cabbage may be planted throughout the year in the southeast. Four ounces of seed will plant one acre. Number of days shown below are from date of setting out plants to maturity.

122 Copenhagen Market (66 days) This cab- bage is the leader in the roundheaded varieties and is the most desirable all-purpose cabbage we list. For earliness, headness, uniformity in size and shape and export quality, it is especially recommended. Heads 6 to 7 inches in diameter and weigh about 4 lb. Pkt. 10c; ½ lb. $1.00; 1 lb. $3.00

117 Early Jersey Wakefield (62 days) An excellent variety. A sure header. We recommend it for the home gardener who desires to plant once. Head in shape, 7 to 8 in. high and about 5 in. in diameter and weigh about 2 to 2½ lb. each. Pkt. 10c; ½ lb. $1.00; 1 lb. $3.00

GERMAIN’S SENSATIONAL NEW Kolorcoat* Dichondra
FILCOAT COATED SEEDS

The Wonder Lawn

*Dichondra*

- Deep, Rich Green All Year
- Requires No Mowing
- Chokes Back Bermuda
- Resists Rough Usage
- Forms Dense Turf
- Thrives in Sun and Shade

Dichondra is a low-growing American plant, native to the southeastern parts of the United States, from Virginia south. It is known botanically as Dichondra Repens or Dichondra Vulgaris. It makes a dense sod by means of runner-like stems, growing very close to the ground, but never forms a thick mat like Bermuda grass. The kidney-shaped leaves, about one-fourth inch wide, and seldom over 1/4 inches in height, have a rich dark velvety-green color. Dichondra is tough in texture and hard usage will not leach the strong turf nor mar its beautiful appearance.

In California and all mild climates dichondra lawns can be started at any time of the year. But as the summer is the best growing season for dichondra, spring or early summer planting gives quickest results. When planting during the colder months, a nurse crop is especially advisable.

In the East or Middle West we recommend spring or early summer planting. This allows sufficient time to develop a strong root system and for the plants to make seed. When the foliage and top growth is hurt by rigorous weather the lawn will then renew itself from the roots and self-sown seeds.

JUMBO (6”x9”) PACKAGE Kolorcoat Dichondra Lawn Seed (Contains enough seed to cover 300 square feet) $1.00
1 LB. CARTON Kolorcoat Dichondra Lawn Seed (Contains enough seed to cover 1000 square feet) $2.65

FARM SEEDS

Germain’s are headquarters for Alfalfa Seed. Clover seeds, pasture and hay grass seeds, cover crop seeds. Sudan, Sorghum, field corn, and other field seeds planted on farms.

Prices on farm seed vary greatly throughout the season; and this fact, coupled with a lack of space, makes a complete listing difficult in a catalogue of this kind. We invite those who are interested in farm seeds to write us for prices on their requirements.

We particularly invite those who are interested in pastures to write us for “Germain’s Pasture Grass Book”. It will be sent with our compliments, and contains much useful information for those interested in the planting and management of pastures.

Cymbidium Orchids
AMERICA'S MOST POPULAR OUTDOOR ORCHID

For Outdoor Planting in Frost-Free Areas—in
Calder Areas Can Be Grown in Pots Outdoors
and Moved Indoors to Protect from Cold Nights

Cymbidium Orchids must have good drainage planted in a mixture of coarse leaf mold
and gravel. The foliage should be syringed once a day, in warm weather, the same
as any other type of orchid. Over watering of the soil at the base of the plant will
cause rot and will eventually kill the orchid.

Ideal location to plant would be a light shaded area with plenty of air circulation.
These orchids will require less care than the average plant now in your garden.
We can not guarantee a specific shade as flowers vary greatly in the same variety.
